

ZOO-Project

The Open WPS platform

What is

ZOO-Project provides a developer friendly Web Processing Service (WPS) framework for creating and chaining Web Processing Services, it is written in C.

It is an open source platform which implements the WPS 1.0.0 and WPS 2.0.0 standards edited by the Open Geospatial Consortium (OGC). A WPS provides web access to functions which run spatial algorithms. ZOO-Project supports many programming languages.

ZOO Tribe

The ZOO Tribe is the community around the ZOO-Project and it is composed by the ZOO Tribal Council (Project Steering Comitee), ZOO Keepers (Comiters), ZOO Visitors (Users and Developers) and the ZOO supporter (Knowledge Partners and Sponsors).

Components

Its core processing engine (aka ZOO-Kernel) lets you execute a number of existing ZOO-Services based on reliable software and libraries.

The ZOO-Project platform is composed by:

ZOO-Kernel: A WPS compliant implementation written in C offering a powerful WPS server able to manage and chain WPS services. By loading dynamic libraries and code written in different languages

ZOO-Services: A growing collection of ready to use Web Processing Services built on top of reliable open source libraries such as GDAL, GRASS GIS, OrfeoToolbox, CGAL and SAGA GIS

ZOO-API: A server-side JavaScript API for creating, chaining and orchestrating the available WPS Services

ZOO-Client: A client side JavaScript API for interacting with WPS servers and executing standard requests from web applications

Where is used

ZOO-Project is used in commercial and accademic webGIS projects where GIS analysis are required through the web.

It can also be used for complete SDI application like MapMint.
